(a) whole-run time, 48 QPs
10× slower
equal
method [s]
CVXOPT default (sparse LDL$^\top$) [s]
reduced system, CHOLMOD
Ruiz + MINRES, CPU (no fallback)
Ruiz + MINRES, CPU (with fallback)
MINRES, switch to direct after 1st rejection (no fallback)
MINRES, switch to direct after 1st rejection (with fallback)
(b) why MINRES falls back on real QPs
MINRES solves needing fallback
